2021	1039.6	42.5	< 5	18.20%	16.82%	--	--	13.44%	20.76%	20.62%	2.91%

*The 3-year trailing tracking error vs. the benchmark is provided as supplemental information.

Acuitas Investments, LLC (“Acuitas”) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with GIPS standards. Acuitas has been independently verified for the periods July 1, 2011 through June 30, 2021. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm’s policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. The Acuitas International Small Cap Composite has had a performance examination for the periods January 1, 2013 through June 30, 2021. The verification and performance examination reports are available upon request.

Acuitas is registered as an investment adviser with the SEC. The firm provides access to investment opportunities in inefficient markets through a multi-manager platform, seeking to offer strategies that outperform their respective benchmarks. Acuitas’ clients are institutional and high net worth investors, whom the firm strives to service with a high level of integrity. The firm maintains a list of composite descriptions, composite definitions, limited distribution funds, and broad distribution pooled funds, which are available upon request.

The Acuitas International Small Cap Composite includes all fully discretionary portfolios that are invested in our International Small Cap strategy, which is currently institutional separate accounts. The Composite includes both tax-exempt and taxable accounts. This is a multi-manager strategy seeking long-term capital appreciation by investing with managers that invest primarily in non-U.S. small cap stocks. Most underlying managers will have broad international mandates, although there may be situations where accounts include regional or country specialists, or dedicated emerging markets small cap mandates. Acuitas considers small cap stocks to be those that fall within the market capitalization range of the FTSE Global Small Cap ex US Index. Portfolios will generally be “core”, with a balance of growth and value managers and stocks in the portfolio. Accounts in this Composite may include emerging markets stocks. As such, the primary benchmark for the strategy is the FTSE Global Small Cap ex US Index, but individual accounts may also use the FTSE Developed Small Cap ex US Index as a benchmark. Composite returns will be reported against the FTSE Global Small Cap ex US Index for periods after 12/31/2018. For periods prior to 12/31/2018, Composite returns were reported against the Russell Global ex-U.S. Small Cap Index, which was discontinued. Key material risks include the risks that stock prices will decline and that the composite will underperform its benchmark. Additionally, smaller stocks have been more volatile than large cap stocks historically. The Composite was created in January 2013, with the inception date of the performance record on January 1, 2013. Performance is expressed in the U.S. Dollar.

The benchmark for the composite is the FTSE Global Small Cap ex US Index. The Index measures the performance of the small cap segment of the global equity markets, excluding U.S. stocks. The composite switched to this Index beginning in 2019 when Russell shut down their global equity indexes. Returns in the presentation are presented against a blend of these benchmarks according to the timeline of the switch. Prior to 2019, individual accounts in the composite have used either the Russell Global ex-U.S. Small Cap Index or the Russell Developed ex-U.S. Small Cap Index as their primary benchmark. As of 6/30/2017, the Russell Developed ex-U.S. Small Cap Index was removed as

a benchmark due to it not being representative of the Composite's investment mandate. All of the portfolios within the Composite make allocations to emerging markets, and the Composite includes direct allocations to emerging markets. The Russell Developed ex-U.S. Small Cap Index did not include emerging markets while the Russell Global ex-U.S. Small Cap Index did include emerging markets, therefore the Russell Developed ex-U.S. Small Cap Index is no longer an accurate representation of the Composite's investment strategy. The Developed ex-U.S. Small Cap Index will still be reported for periods prior to 6/30/2017 in the Composite's disclosures.

Past performance is not indicative of future results. Performance shown represents total returns that include income, realized and unrealized gains and losses. Gross of fee returns are calculated net of all transaction costs. For separate accounts, gross of fee returns are gross of custody costs and administrative costs that are not charged directly to the account. In cases where sub-advisory fees are paid by Acuitas, gross of fee returns are calculated gross of sub-advisory fees. The net of fee performance reflects an asset weighted average of actual management fees incurred by clients, which may vary. Composite performance is presented net of foreign withholding taxes on dividends, interest income, and capital gains. Withholding taxes may vary according to the investor's domicile. The current stated fee schedule for a standalone portfolio is 1.10% on all assets. This fee includes all fees paid to subadvisers. Further information regarding investment advisory fees is described in Part 2A of the firm's Form ADV and further information regarding the mutual fund expenses can be found in the current prospectus.

Policies for valuing portfolios, calculating performance, and preparing GIPS Reports are available upon request. A measure of internal composite dispersion is not shown, due to an insufficient number of portfolios in the composite for an entire calendar year. The three-year annualized standard deviation measures the variability of the Composite gross returns and the benchmark returns over the preceding 36-month period.
